PROFESSIONAL SUMMARY

Engineering leader and hands-on builder with 20 years in healthcare technology at WellSpan Health, a 24,000-person health system, the past 10+ leading engineers, most recently 11 direct reports including 2 architects. Owned a platform of 2,800+ integration components and 125+ partners and led its modernization: 1,700+ interfaces migrated with no customer-visible downtime, 14 servers moved to AWS, and sites ported to .NET Core in about a third of the time with Claude Code. Builds the developer platforms and tooling that make teams faster, grows engineers, and has never stopped writing code.

CORE COMPETENCIES

Engineering Leadership & Hiring | Modernization & Cloud Migration | Healthcare Interoperability (HL7, FHIR, EDI) | Developer Platforms & Tooling | Reliability & Incident Response | Product Thinking | Full-Stack Development | AI-Assisted Engineering

KEY ACCOMPLISHMENTS

- **Modernization:** led the Cloverleaf-to-Mirth migration of 1,700+ live interfaces (both engines in parallel, every output diffed) with no customer-visible downtime and $500,000 a year saved; moved 14 servers to AWS, avoiding a multi-million-dollar VMware bill; ported .NET Framework sites to .NET Core in about a third of the time with Claude Code.
- **Reliability:** cut a 100+ incident backlog to 10 or fewer under a 7-day SLA with daily root-cause reviews (monthly incidents down about 21%); rebuilt a PostgreSQL database handling 2B+ write transactions within 30 minutes of approval after an outage, then automated its maintenance.
- **Developer platform:** a 150+ function shared library with tests, templates per interface type, training videos, a monitoring and deployment portal, and a ServiceNow process layer other teams adopted; consolidated 3 request types into 1 and doubled per-developer closures (2 to 4 a month) while demand rose 32%.
- **People:** grew a team from 4 to 11; designed the hiring process end to end and trained 5 new teammates in about a year; 6 promotions across 4 people, including one to Architect; 4.98/5 manager rating; no voluntary departures.
- **Delivery and cost:** ran annual Open Enrollment across 4 teams and 15 people, early in 2025 and ahead of schedule in 2026; replaced 12 external consultants and 2 contractors in 7 months, retiring $3M+ a year in spend with no customer impact.
- **Products:** built a patient portal through regulatory approval to 80,000+ users in year one and a native iOS app as the sole developer in 6 months; founded and run Tasty Tracker (2,725 members on the original version) and LeaseTracker.
- **AI-assisted engineering:** piloted Claude Code on a real migration, wrote the team's AI guidelines (all AI output reviewed and tested, no PHI in prompts), and reviewed output in 1:1s as developers warmed up to it.

TECHNICAL SKILLS

Languages: C#, .NET Core, Entity Framework, JavaScript/TypeScript, Node.js, React, Python, Java, PHP (Laravel), SQL, PL/SQL

Integration: Mirth Connect, Cloverleaf, Epic Bridges; HL7 v2, FHIR, X12 EDI, REST and SOAP, SFTP/PGP

Data and Cloud: PostgreSQL, SQL Server, Oracle, MySQL; AWS, Azure, Docker, OpenShift, Red Hat Linux

Delivery and AI: Git, GitHub Actions, Jenkins, Azure DevOps, CI/CD, ServiceNow, Jira; Scrum, Kanban; Claude Code

EDUCATION

Oregon State University
Bachelor of Science in Business Administration June 2023
GPA: 3.92

York Technical Institute
Associate of Specialized Business May 2006
GPA: 4.0

CERTIFICATIONS

- AWS Cloud Practitioner Essentials — Amazon
- Project Management Professional (PMP) — Project Management Institute, in progress, expected late 2026
- Oracle Cloud Infrastructure Certified Application Integration Professional — Oracle

PROFESSIONAL EXPERIENCE

WellSpan Health, York, PA

Manager of Enterprise Integration September 2015 – September 2026

- Led the integration function from a team of 4 to 11 direct reports across two teams when a second unit was added in 2025, owning 2,800+ integration components for clinical and Oracle ERP business systems.
- Selected Mirth Connect and migrated 1,700+ interfaces off Cloverleaf by running both engines in parallel and diffing every output, which surfaced and fixed older bugs and saved $500,000 a year; built the monitoring and management portal the team used to see interface health, debug, and deploy.
- Migrated all 14 servers to AWS in planned waves, split the application and database tiers, fixed a throughput regression with a disk-optimized instance type, and led the start of containerization with Kubernetes manifests for OpenShift.
- Designed and built an Oracle job scheduler with pluggable connectors, downtime windows, dependency ordering, and a load heatmap (about 12 hours a month saved), and a nightly export of all Oracle custom assets into git that made them searchable and versioned.
- Oversaw payroll automation for 24,000+ employees ($100M+ per pay period) with gated states and validation checkpoints, owned the HR identity feeds that create and disable downstream accounts, and moved banking integrations to a new bank in under a year.
- Governed 125+ business vendor integrations with SLA tracking, interface specifications, and onboarding schedules, and managed independent physician office integration: 28 external EMRs across 180 offices and 1,411 providers, with go-lives run on site.
- Managed Open Enrollment each year across 4 teams, from vendor contracts and business associate agreements to go-live, onboarding 3 new vendor integrations for the 2026 plan year.

WellSpan Health, York, PA

Senior Software Development Engineer, Web September 2012 – September 2015

- Led patient portal development from the ground up, including regulatory approval, reaching 80,000+ users in its first year, and built WellSpan's iOS app from scratch to the App Store in 6 months.
- Built a prescription refill workflow around a pharmacy system that could not be integrated: an admin tool for pharmacy staff at every location, web services, an iOS barcode scanner, and a portal page.
- Built an adaptive patient questionnaire patients completed on office iPads, with rules-based follow-up questions, the on-call management system used by the IT department, CI/CD pipelines, and automated testing frameworks.

WellSpan Health, York, PA

EDI/Integration Analyst September 2008 – September 2012

- Developed standards, templates, and libraries to speed interface development; led multiple Cloverleaf upgrade cycles and built custom APIs for platform maintenance.

WellSpan Health, York, PA

EDI/Integration Analyst Associate October 2006 – August 2008

- Designed the initial integration architecture for independent physician offices and built real-time and scheduled interfaces.

Tasty Tracker and LeaseTracker, York, PA

Founder and Developer January 2018 – Present

Design, build, and run two SaaS products end to end; more projects at https://thorst.github.io/portfolio/.

- Tasty Tracker (https://tastytracker.com), a trade-journaling platform with tiered Stripe subscriptions, and LeaseTracker (https://leasetracker.net), a property-management platform with Stripe rent payments, a tenant portal, and an Android app.
